"The Great Springs Trail is more than just a hike and bike trail. It will conserve a breathtaking part of Texas in the most quickly developing region in the United States." ACADEMY AWARD WINNING ACTOR, MATTHEW MCCONAUGHEY

00

A MESSAGE FROM OUR CEO

Dear Friends of Great Springs Project,

The Hill Country unites us in so many ways: the open plains, the Ashe juniper forests, the crystal-clear springs that breathe life into the land—the incredible environment of this region provides for us, protects us, and creates community for all Texans.

As we reflect on 2024, I want to extend my heartfelt gratitude for your support of Great Springs Project's mission and work. Your commitment to protecting natural lands and open spaces, conserving precious water resources, and connecting our communities through trails is what propels this project forward.

2024 was a year of progress. We proudly celebrated conservation victories such as providing public access to the Morton Preserve, a pristine 288 acres of Hill Country overlooking the Guadalupe River. We completed the two-year Landowner Outreach Initiative in which we created a holistic database of high-conservation properties in Central Texas and fostered essential relationships with the owners of those properties, effectively laying the groundwork for our conservation projects for the next decade. Trail progress has also advanced through funding received from Texas Parks and Wildlife for trails to be constructed in 2025 and 2026 and in the protection of natural areas like Limestone Link in San Marcos, which is open to the public and provides essential connecting trail in Hays County.

At its core, Great Springs Project is a connector—not just of trails and green spaces, but of people, organizations, and stakeholders dedicated to conservation. By fostering partnerships between landowners, local governments, businesses, and community groups, we drive progress toward protecting our region's most precious resources. Our mission is an essential investment in community and environmental health. Protection of natural lands and water resources can ensure we maintain and improve the quality of life in the San Antonio-Austin corridor for generations to come.

Looking ahead, we are thrilled to announce an exciting new collaboration—a corridorwide study funded in part by the Texas Department of Transportation (TxDOT) and engaging all the cities, counties, and other stakeholders from San Antonio to Austin to accelerate the construction of the trail network from the Alamo to the Capitol. This partnership represents a major leap forward in planning and progressing essential green space infrastructure in this region, and its results will be a catalyst for the 100-mile trail network's development.

Now, we ask for your continued support. Help us spread the word, engage with your communities, and advocate for the protection of the region's natural lands and springs. Together, we can ensure a future that continues to see Central Texas and the Hill Country, its people, and its natural resources thrive.

Sincerely,

Garry Merritt

Darry Merrit

ABOUT US

BUILDING A REGIONAL VISION FOR CONSERVATION & CONNECTIVITY

Great Springs Project (GSP) is working to create a greenway of 50,000 acres of additional protected lands between Austin and San Antonio over the Edwards Aquifer recharge zone. This green corridor will be connected by a 100-mile network of spring-to-spring trails, linking four iconic springs in Central Texas: Barton Springs, San Marcos Springs, Comal Springs, and San Antonio Springs. GSP works to unify existing local efforts and green infrastructure projects to address the most critical water, land, wildlife, and public health challenges facing the Central Texas region.

Presa Grande , Photo by Jennifer M. Ramos

"Great Springs Project is the perfect way to connect Texans both with nature, as well as with economic development. From Austin to San Marcos, to San Antonio, establishing this green protected corridor will preserve the greatness of Texas' natural resources."

- Governor of Texas, Greg Abbott

THE NEED FOR PUBLIC GREEN SPACE

Project Annual Report | 2024

Great Springs

GREEN SPACES FROM THE ALAMO TO THE CAPITOL

Trails, parks, natural areas, and other green spaces provide extensive environmental, economic, and public health benefits to the areas that surround them.

LAND CONSERVATION & WATER PRESERVATION

CONTINUED MISSION THROUGH COMMUNITY CONNECTIVITY

Great Springs Project's mission to conserve natural lands and build trail across the Austin-San Antonio corridor is a vital project to building more sustainable, connected, and healthier communities for the future of this region.

LAND CONSERVATION & WATER PRESERVATION

PROTECTING AQUIFERS & SPRINGS

8

Land conservation and the creation of public green spaces, such as parks and trails, offer benefits that extend beyond community health—they play a crucial role in protecting aquifers, particularly in the Austin-San Antonio region. This area is primarily supplied by the Edwards Aquifer, a karst aquifer that provides drinking water to over 2.5 million people. Preserving natural lands helps maintain the integrity of recharge zones, where rainwater percolates into the aquifer, while reducing contamination risks from urban runoff and development. Green spaces with native vegetation also enhance water filtration and slow stormwater flow, preventing excessive erosion and sedimentation that can degrade water quality. By prioritizing land conservation, communities not only safeguard their natural landscapes but also ensure a sustainable and clean water supply for generations to come.

Pictured: San Marcos, San Antonio, and Comal Springs, Photos by Jennifer M. Ramos Information sourced from the Lower Colorado River Authoriy, Texas Water Development Board, and the Edwards Aquifer Authority

AQUIFER RECHARGE

1. Rainfall Hits Recharge Zone

Rainfall and runoff occurs over the aquifer's contributing and recharge zones.

2. Water Seeps Through Ground

Water enters the aquifer through the limestone karst's cracks, crevices, caves, and sinkholes in natural 'recharge zone' lands.

3. Water Collects in Aquifer System

The water percolates further underground into the artesian zone, where it is stored in a complex network of interconnected caves.

4. Water Surfaces at Natural Springs

Water surfaces at natural springs, such as the Comal and San Marcos Springs.

5. Water Use From the Aquifer

Communities utilize water from the aquifer through wells and other extraction methods. Over 2.5 million people utilize water from the aquifer daily.

- Scissor-Tailed Flycatcher
- Red-Shouldered Hawk
- Northern Cardinal
- Turkey Vulture
- Crested Caracara
- Eastern Screech Owl
- Eastern Gray Squirrel

Riparian Zone – Found along rivers, creeks, and springs, including the Colorado River, San Marcos River, Comal River & Guadalupe River.

- Guadalupe Bass
- Fountain Darter
- Texas River Cooter
- San Marcos Salamander
- Central Texas Blind Salamander
- Comal Springs Riffle Beetle
- Channel Catfish
- Plains Killifish
- Great Blue Heron
- Belted Kingfisher

Edwards Plateau – Covers much of the Hill Country, west of I-35 & recharge zones.

- Golden-Cheeked Warbler
- Black-Capped Vireo
- Greater Earless Lizard

Balcones Escarpment – A transition zone between the Blackland Prairie and Edwards Plateau, running along the I-35 corridor.

- Golden-Cheeked Warbler
- Black-Capped Vireo
- Greater Earless Lizard

NATIVE & ENDEMIC SPECIES

These species can be found in the San Antonio - Austin corridor

CAGLE'S MAP TURTLE

12

A freshwater species found in the Guadalupe and San Antonio river basins of Texas. It relies on a healthy river ecosystem, fed by the Edwards Aquifer.

AUSTIN BLIND SALAMANDER

Lives exclusively in the underground waters of the Edwards Aquifer beneath Austin. Since it never leaves the aquifer, it depends on stable groundwater flow and purity for survival.

TEXAS FATMUCKET

A freshwater mussel found in the San Marcos and Guadalupe. It relies on aquifer-fed streams as pollution and reduced flow threaten its survival.

FOUNTAIN DARTER

A small fish living in the San Marcos and Comal Springs, depending on consistent water temperatures and flow from the Edwards Aquifer.

SAN MARCOS SALAMANDER

Inhabits the clear, spring-fed waters of the San Marcos River, emerging from the Edwards Aquifer.

BARTON SPRINGS SALAMANDER

Endemic to Barton Springs in Austin, where it depends entirely on the Edwards Aquifer's water flow. Any changes to the aquifer's quality or levels threaten its survival.

TEXAS WILD RICE

An endangered aquatic grass found only in the clear, spring-fed waters of the San Marcos River. It relies on the constant flow of clean, cool water from the Edwards Aquifer, making it highly sensitive to changes in water levels and quality.

Graphic by Adrian Mosser Credit: U.S. Fish and Wildlife Service, Austin Ecological Services Field Office.

MEXICAN FREE-TAILED BAT

Forms large colonies under Central Texas Bridges and in natural caves. Aquifer-fed springs and rivers help maintain insect populations, which are crucial for the bat's diet.

TRI COLORED BAT

The tricolored bat roosts in Texas caves and trees, relying on the aquifer-fed waterways for insect populations. Habitat loss and disease have severely impacted its numbers.

COMAL BEETLE

An aquatic beetle found in the Comal Springs, directly dependent on the steady flow of clean, oxygen-rich water from the Edwards Aquifer to survive.

MONARCH BUTTERFLY

Migrates through Texas and relies on native milkweed and nectar plants, which depend on aquiferfed ecosystems to remain healthy.

BLACK-CAPPED VIERO

Relies on the shrubby woodlands of Central Texas, which are sustained by the water resources of the Edwards Aquifer.

GOLDEN-CHEEKED WARBLER

Nests exclusively in the Ashe juniper-oak woodlands of Central Texas, which are indirectly affected by aquifer health. Drought and habitat loss due to land development threaten its breeding grounds.

LANDOWNER OUTREACH INITIATIVE

At the beginning of 2023, Great Springs Project launched an ambitious two-year Landowner Outreach Initiative to meet with the owners of 1,400 high-conservation value land parcels, 50 acres or greater in size. The goal of this engagement includes conservation easements, land purchases, trail right-of-way, land use management practices, and other conservation outcomes. The end of the calendar year 2024 marks the conclusion of the initial 2-year outreach phase, but the conservation work is just beginning. The Landowner Outreach Initiative has created a comprehensive regional database of land ownership and relationships with over 800 landowners. This can help GSP and partners move properties into conservation outcomes. The Landowner Outreach Initiative will feed GSP's conservation pipeline for the next 10 years. This phase of the initiative has already resulted in over 60 conservation projects ready for conservation outcomes.

Engaging directly with landowners has allowed GSP to better understand their aspirations and concerns while providing an educational resource on the benefits of conservation. As we continue to foster relationships with landowners, GSP and partners also work to connect funding opportunities and resources to help drive conservation outcomes forward. This initiative is creating conservation opportunities in this region at unprecedented rates. With the goal of permanently conserving 50,000 additional acres in this region, GSP is seeking funding for these projects through a combination of public and private funds as well as establishing a first-of-its-kind land investment fund. The Landowner Outreach Initiative is directly supported by:

TXDOT CORRIDOR STUDY

In late 2023, Great Springs Project received a \$2m+ Transportation Alternatives grant award by the Texas Department of Transportation (TXDoT). This grant will fund a Corridor Study that will create a comprehensive strategy and plan to advance the Great Springs Trail network from San Antonio to Austin. Specifically, through stakeholder engagement and careful analysis, the study will not only categorize our targeted and priority areas but also identify constraints and opportunities. The result will be a document of developable projects taken through schematic level design with associated budgets.

Projects will extend throughout corridor in all our 4 counties and will align with regional ecological restoration objectives including the recharge of the Edwards Aquifer. This study will commence in the Summer of 2025 with the final output anticipated in 2026.

Great Springs Project is the first non-profit to receive an award from this program. Over 30 key project stakeholders including mayors, municipalities, and state representatives provided letters of support.

The Great Springs Trail Network may look different across various settings.

THE MORTON PRESERVE 20

The Morton Preserve, a stunning natural sanctuary dedicated to the protection of endangered species, is now officially open to the public. This beautiful 288-acre site, located on Bluff End Road just off River Road between the Second and Third Crossings, was acquired by Comal County in 2008 through a grant from the U.S. Fish and Wildlife Service as part of the Cooperative Endangered Species Conservation Fund.

The Morton Preserve is a vital habitat for various endangered species, including the Golden-Cheeked Warbler, a small songbird native to Central Texas. This initiative really shows how dedicated Comal County is to protecting our region's amazing wildlife and preserving our natural environment.

Great Springs Project collaborated with Comal County, U.S. Fish & Wildlife and Texas Parks & Wildlife on a management plan for the Preserve.

"Collaborative projects like this require trust, time and resources. Great Springs Project is honored to work with our public agency partners and conservation supporters to protect critical habitat, provide appropriate public access, and ensure the future of iconic Texas landscapes like the Morton Preserve" -Scott Parker, GSP's Land Transactions Director

Visitors have the opportunity to explore the Preserve from September through February, with a reservation system in place managed by Comal County. Because of its ecological significance, access is limited to a small number of visitors at a time.

"I am grateful to the Great Springs Project, U.S Fish and Wildlife, as well as Texas Parks and Wildlife for all their help in getting the management plan in place. The management plan allows the preserve to be open to the public on a limited basis outside of the Golden Cheeked Warbler mating season. I would like to give a special shout out to the Road Department for their excellent work and Robert Boyd our engineer who was point man on this project. We have been working on this quite a while."

-Donna Eccleston, Former Comal County Precinct 1 Commissioner

SAN MARCOS LOOP

Graphic by Adrian Mosser

Freedom

The Great Springs Project was awarded \$248,640 for the construction of a new 1.41-mile, 8-foot wide multiuse decomposed granite trail as part of the Freedom Segment of the Emerald Crown Trail.

Freeman Ranch

In 2024, Texas State University received \$135,740 Recreational Trail Grant to construct a 0.95-mile multiuse natural surface trail, specifically the Freeman Ranch segment of the San Marcos Outer Loop Trail.

La Cima

This 1.75-mile trail to be constructed runs through the La Cima development and adjacent natural areas and will be linked with two other trail segments, offering 4.5 miles of new trails for the San Marcos community.

Limestone Link

This 102-acre property was originally purchased by GSP investors in 2017, then was acquired by Hays County in Fall 2023 and designated to become an open space preserve. Efforts to prepare the property for public access were conducted throughout 2024.

Great Springs Project, San Marcos Greenbelt Alliance, and Hays County continue to coordinate the preparation of the site, and trail planning is completed. A huge thanks to the San Marcos Greenbelt Alliance volunteers for their continued efforts on the property! The new trail on Limestone Link will connect existing trails at Ringtail Ridge Natural Area and River Recharge Natural Area. The trail is open to the public in Spring 2025!

Presa Grande

Presa Grande is a remarkable 844-acre tract of land just minutes from downtown San Marcos. Located in the Sink Creek watershed, this property is riddled with karst and aquifer recharge features, making it a crucial component of protecting water quality, quantity, and inflows into San Marcos Springs. With its ability to absorb and channel water from storm events, the property also mitigates the impact of flash flooding. Presa Grande supports many plant and animal species and contains habitat for the endangered Golden-Cheeked Warbler. Presa Grande has been protected via conservation easements thanks to the Edwards Aquifer Authority, and in 2024, Hays County received \$300,000 for construction of another segment of the San Marcos Outer Loop Trail on the property. The Presa Grande Segment will be a 1.8-mile, 5-foot wide multiuse natural surface trail with benches, a bridge, and a trailhead kiosk.

LAND & TRAIL ACCOMPLISHMENTS

Graphic by Adrian Mosser

Cibolo Creek Connector in Selma, TX

The City of Selma received funding from the Alamo Area Metropolitan Planning Organization for the Cibolo Creek Trail Extension. Construction of a shared-use path along Cibolo Creek will connect existing trails at Evans Road and Stage Stop Park.

Schertz Developing Hilltop Park and West Dietz Creek Trail Projects

The City of Schertz and Schertz Parks and Recreation recently received significant grant funding to propel two park and trail projects forward. Funds from Texas Parks and Wildlife will initiate further development in Hilltop Park, greatly expanding and improving the infrastructure and features of the space. Alamo Area Metropolitan Planning Organization grant funds will initiate a new West Dietz Creek Trail Project, creating an accessible 1.76-mile trail along the creek.

Future 131-Acre Park Purchase Near Alligator Creek in New Braunfels

In early February 2024, the City of New Braunfels approved a 131-acre tract for future public green space. This land acquisition, funded by the New Braunfels Economic Development Corporation, could soon become one of New Braunfels' largest parks and will be a significant addition to protected green spaces within Comal County.

GSP's CEO, Garry Merritt, on the new park development: "Great Springs Project celebrates the City of New Braunfels's decision to purchase and dedicate 131 new acres for parks and green space. This incredible vision and investment will help preserve the quality of life in New Braunfels and provide value for today's residents and generations to come."

Onion Creek Greenway

Travis County approved a bond to connect Mckinney Falls State Park and Richard Moya Park via trail. Great Springs Project is working with other stakeholders to continue connections through Barkley Meadows and Southeast Metro Park in Austin.

COMMUNITY EVENTS

LAUNCHING GSP'S VOLUNTEER PROGRAM

In 2024, over 200 volunteers graciously donated more than 1,400 hours of their time to GSP – a value of nearly \$45,000. Our generous and dedicated volunteers removed 900 pounds of waste from trails and creeks, removed invasive species, reintroduced native plants, and built 5 miles of new trail in Travis and Hays Counties. We are incredibly grateful for their time and dedication.

"It's great to volunteer your time for this worthy cause!" -Tricia J, INTERA Executive Vice President Marketing & Principal Scientist GSP's Volunteer Program is Directly Supported by:

TRAIL BUILDING

Great Springs Project, Tejas Trails: Trail Crew and the Travis County Parks Foundation volunteers worked together on carving new trails at Southeast Metropolitan Park in Travis County. Thank you to the dedicated volunteers who have spent hours carving over 5 miles of new trail for public use. These new trails will be showcased in a Trail Race in March 2025!

CREEK CLEANUPS

Great Springs Project partnered with Keep Austin Beautiful's Adopt-a-Park program, conducted creek cleanups and invasive species removal at the Onion Creek Soccer Complex in South Travis County. A total of 5 cleanups were conducted in 2024.

BEYOND THE BUDGET

Great Springs Project is a 501c(3) nonprofit that works alongside a diverse set of project stakeholders to advance the region's natural land conservation and public green space projects. GSP works as a catalyst in the region, advancing land conservation outcomes and trail and park projects by working closely with municipalities, counties, infrastructure entities, and other stakeholders. Through GSP's work and advocacy, a regional vision for the future of green spaces in this region now includes the GREAT SPRINGS TRAIL, and progress on this 100-mile trail network connecting the San Antonio-Austin region is well on its way.
